Senior Data Analyst with 3+ years in FMCG analytics at Tempo Scan Pacific. Specializing in sales reporting, pipeline optimization, and demand forecasting using SQL (PostgreSQL), Python (Pandas), Tableau, and Excel. Proven track record in end-to-end dashboard delivery, cross-functional stakeholder management, and data-driven recommendations across Marketing & Trade.

EXPERIENCE

Senior Data Analyst, *Tempo Scan Pacific* - February 2026 – Present

- Reviewing and optimizing data pipelines across multiple source systems to improve processing efficiency and reduce report turnaround time.
- Collaborating with manager on sales and demand forecasting projects, building predictive models to support commercial planning.
- Managing intake and integration of external B2B data (Modern Trade Selling-In/Out) to benchmark against internal performance metrics.
- Leading ad-hoc analytical projects based on business unit requests, delivering actionable insights using Python, Tableau, Excel, and PostgreSQL.

Data Analyst, *Tempo Scan Pacific* - January 2023 – January 2026

- Delivered monthly sales dashboards in Tableau for Marketing, Trade, and Finance; tracked budget vs. actual with drilldowns by SKU, Channel, and Branch.
- Supported annual marketing budgeting end-to-end: built SKU-level sales forecasts, allocated branch budgets, and consolidated final files for leadership.
- Owned Sales and Service Level reporting pipeline: gathered requirements, designed ERD & PostgreSQL schema, built Python cleaning pipelines, and delivered Tableau dashboards.
- Conducted customer analytics (RFM Segmentation + Market Basket Analysis) to identify segments and product affinities for promotion optimization.

Staff Intern, *Bank Rakyat Indonesia* - March 2022 – September 2022

- Managed credit card data entry and monthly recapitulation reports using Excel. Processed QRIS merchant approval workflows for digital payment onboarding.

PROJECTS

- **B2B Reporting Pipeline** (SQL/Python/Tableau): Designed data model, built ETL cleaning pipeline, and delivered interactive dashboards for B2B trade analytics.
- **Customer Analytics** (Python): Built RFM segmentation and association-rule models to identify customer segments and optimize trade promotions.

EDUCATION

Economics – Universitas Gadjah Mada

TECHNICAL EXPERTISE

- SQL (PostgreSQL): CTE, joins, aggregation, window functions, ERD design, database updates
- Python: Pandas, data cleaning, automation, forecasting, pipeline optimization
- BI & Analytics: Tableau dashboard design, KPI definition, stakeholder management, ad-hoc analysis, Excel
